Biochemistry is a field of biology that studies the chemical reactions within living organisms. Life can be reduced down to thousands of chemical reactions that continuously occur to keep an organism alive. Biochemistry studies the very important chemical pathways that have allowed for life to live and evolve to the incredible diversity we now have on Earth.

~~Biochemistry - Basic Biology~~  
There are a number of essential metabolic pathways you will have to memorize when taking biochemistry: glycolysis, oxidative phosphorylation, the citric acid cycle (Krebs Cycle), the electron transport chain, and photosynthesis, to name a few. Read the associated text in your book and study the figure detailing the process of the pathway.
