There is a traditional connection between conatus and motion itself. Aquinas and Abravanel (1265–1321) both related the concept directly to that which Augustine (354–430 CE) saw to be the "natural movements upward and downward or with their being balanced in an intermediate position" described in his *De Civitate Dei*, (c. 520 CE). They called this force that causes objects to rise or fall ...

In physics, the center of mass of a distribution of mass in space (sometimes referred to as the balance point) is the unique point where the weighted relative position of the distributed mass sums to zero. This is the point to which a force may be applied to cause a linear acceleration without an angular acceleration. Calculations in mechanics are often simplified when formulated with respect ...
