Taxonomy and systematics. Chipmunks may be classified either as a single genus, *Tamias*, or as three genera: *Tamias*, of which the eastern chipmunk (*T. striatus*) is the only living member; *Eutamias*, of which the Siberian chipmunk (*E. sibiricus*) is the only living member; and *Neotamias*, which includes the 23 remaining, mostly western, species. These classifications were treated as subgenera due to ...

Modern Synthesis. The Modern Synthesis describes the fusion (merger) of Mendelian genetics with Darwinian evolution that resulted in a unified theory of evolution. It is sometimes referred to as the Neo-Darwinian theory. The Modern Synthesis was developed by a number of now-legendary evolutionary biologists in the 1930s and 1940s.

Modern Synthesis / Encyclopedia.com

Evolution is a biological process. It is how living things change over time and how new species develop. The theory of evolution explains how evolution works and how living and extinct things have come to be the way they are. The theory of evolution is a very important idea in biology. Theodosius Dobzhansky, a well-known evolutionary biologist, has said: "Nothing in biology makes sense except ...
