Local anaesthetics. Local anaesthetics (LAs) are applied to block nociception (pain perception) that is transmitted via peripheral A and C nerve fibres to the brain.

Chemically, LAs are amphiphilic molecules with a hydrophobic aromatic group and a

Mechanisms Of Action

The potency of a drug is defined as the dose or concentration range over which it produces its effects and can be measured by terms such as ED 50. Clinically, inhalational anaesthetic potency is described by MAC or minimum alveolar concentration that prevents movement to a surgical stimulus in

A general anaesthetic is a drug that brings about a reversible loss of consciousness. These drugs are generally administered by an anaesthetist/anesthesiologist in order to induce or maintain general anaesthesia to facilitate surgery. General anaesthetics have been widely used in surgery since 1842 when Crawford Long for the first time
