Hydropower is the favoured energy option for the Mekong's riparian countries. [6] [7] The ...

Hydropower in the Mekong River Basin - Wikipedia

The Mekong Basin is home to some 70 million people, for whom this great river is a source of livelihoods, the basis for their ecosystems and a foundation of their economies. But the Mekong is also currently undergoing enormous social, economic, and ecological change of which hydropower development is a significant driver.

Hydropower Development in the Mekong Region: Political ...

Hydropower development in the LMB brings both positive and negative consequences. According to the MRC Council Study on the Sustainable Management and Development of the Mekong River Basin including Impacts of Mainstream Hydropower Projects, the LMB could see economic gains from full hydropower development of more than \$160 billion by 2040. Development of hydropower brings synergies with other water related sectors as well, including expanding irrigation that is key to food security ...

Hydropower - Mekong River Commission

The model of hydropower development being pursued in the Mekong is cascades of dams, where each dam spills directly into the next downstream pondage. This model, widely applied in China, maximizes the potential electricity yield, but it also maximizes the negative environmental and social impact of dams.

Frontiers | Hydropower Development and the Loss of ...

Energy hungry. An increase in power demand along with inflated forecasts of future demand, volatile prices in international energy markets, and concerns over carbon emissions have intensified interest in hydropower development – one of the Greater Mekong's major renewable energy sources.

Hydropower development in the Greater Mekong | WWF

The statement added that over the last decade, intensive hydropower development has brought substantial economic benefits to the Mekong countries. That being said, the gains have resulted in...

MRC releases new guidelines for Mekong hydropower development

PDF. The Mekong River is one of the world's last large rivers remaining mostly undammed. But China is constructing a series of eight hydropower projects on the upper Mekong. Although there are...

Mekong Hydropower Development | Science

The development of hydropower potential in the Mekong River has long been of interest to governments in the region. Among the existing 64 dams, 46 dams have been built in the Lower Mekong Basin ...

(PDF) Mekong Hydropower Development

Reviews the history of Chinese hydropower development on the Lancang from the 1950s to the present, the downstream political, economic and environmental implications of Lancang hydropower, China's hydropower influence in the Lower Mekong Basin, and China's external environmental and social policies related to hydropower.

China's Influence on Hydropower Development in the Lancang ...

The assessment of water resources for hydropower development in the Kingdom of Cambodia indicated that Cambodia has an abundant hydropower potential. The technical hydropower potential is about 4,347MW (or 7,182MW if Sambor HPP = 3,300MW), which the Mekong mainstream 1,445MW (or 4,280MW), Mekong Tributaries 1,908MW, outside Mekong Basin 994MW.

Hydropower - MekongInfo

The overall impression I've formed from the research done on this issue, including from gender impact assessments of Mekong hydropower projects and the results of our State of Knowledge report, is that women are not being consulted enough in the early phases of an infrastructure, particularly hydropower, project's life cycle.

Incorporating gender into Chinese hydropower development ...

This dataset contains all known hydropower developments across the Greater Mekong Subregion although is not a complete dataset. It includes original data collected by Open Development Cambodia and Open Development Vietnam as well as sources from International Rivers and the Consultative Group on International Agricultural Research (CGIAR) Challenge Program on Water and Food - Mekong.

Greater Mekong Subregion hydropower dams (2016) - OD ...

Hydropower has both the positive and negative influence on macro-economic growth in the LMB: Hydropower emerges as the sector with highest relevance to contribute to macro-economic growth for the lower Mekong basin.

THE COUNCIL STUDY - Mekong River Commission

The construction of dams in the Mekong Basin greatly impact the fish migration and local fisheries. Generally, the development of a hydropower dam results in altered flow patterns and creates a large physical barrier, thus disrupting the fish and their breeding habitats within the river.

Energy in Laos - Wikipedia

Over the past decade, intensive hydropower development has brought substantial economic benefits to the Mekong countries. However, the gains have resulted in tradeoffs with other key sectors across economic, environmental and social spheres.
