BBC - WebWise - What are Java and Javascript?

JavaScript was invented by Brendan Eich in 1995, and became an ECMA standard in 1997. ECMA-262 is the official name of the standard. ECMAScript is the official name of the language.

JavaScript Introduction - W3Schools

When comparing a string with a number, JavaScript will convert the string to a number when doing the comparison. An empty string converts to 0. A non-numeric string converts to NaN which is always false. When comparing two strings, "2" will be greater than "12", because (alphabetically) 1 is less than 2.

JavaScript Comparison and Logical Operators

JavaScript is the Programming Language for the Web. JavaScript can update and change both HTML and CSS. JavaScript can calculate, manipulate and validate data.

What is JavaScript - W3Schools

Spread syntax allows an expression to be expanded in places where multiple arguments (for function calls) or multiple elements (for array literals) are expected.

Expressions and operators - JavaScript | MDN

Click Here to avail a subscription JavaScript is a simple, dynamic, object-orientated programming language. Its client-side interaction gives JavaScript broad appeal. If you have surfed the net you have seen JavaScript in action.

JavaScript (1.8.5) Online Training Course

JavaScript (JS) is a lightweight, interpreted, or just-in-time compiled programming language with first-class functions. While it is most well-known as the scripting language for Web pages, many non-browser environments also use it, such as Node.js, Apache CouchDB and Adobe Acrobat. JavaScript is a prototype-based, multi-paradigm, single-threaded, dynamic language, supporting object-oriented, imperative, and declarative (e.g. functional programming) styles.

JavaScript | MDN

The following is a changelog for JavaScript 1.8.5. This version was included in Firefox 4. New features in JavaScript 1.8.5 New functions. Function Description; Object.create() Creates a new object with the specified prototype object and properties. bug 492840: Object.defineProperty()

New in JavaScript 1.8.5 - Archive of obsolete content | MDN

However, JavaScript arrays are of inconsistent ilk. They're actually closer array-like objects (even though we usually use that term to refer to things like arguments and NodeLists). This function gives you a way to be 100% sure that what you're working with is an array. Pass it a variable, and it returns the boolean.
