The freeze plugs only close off the cooling jacket. Unless oil has made it's way into the cooling jacket somewhere. I wonder if it's really coolant/water that's mixing with oil already present on the back of the block in that area maybe? If there wasn't any oil in the coolant when you drained it, it's not likely mixing in the block.

MG Midget and Austin Healey Sprite Parts and Accessories

An intercooler is a mechanical device used to cool a gas after compression. Compressing a gas increases its internal energy which in turn raises its temperature and decreases its density. An intercooler typically takes the form of a heat exchanger that removes waste heat in a gas compressor. Intercoolers have a variety of applications, and can be found, for instance, in air compressors, air ...

Intercooler - Wikipedia

I have a 2012 Mini Cooper S R56 that currently has the check engine light on with code P0172 (showing as permanent). So far I have had the high pressure fuel pump replaced, the air intake box, the thermostat/thermostat housing, valve cover gasket (due to leakage during a smoke test), all 4 spark plugs, and both O2 sensors.
