The Journal of Organic Chemistry 1964 29 (7), 1976-1979 DOI: 1021/jo1030a078 This paper describes mechanistic studies of m -CPBA oxidation that demonstrate that ionic intermediates are not involved in the reaction, and that the rate is insensitive to solvent polarity.

Organic crystal microwires that transform light into oscillatory motion are reported by Rabih O. Al?Kaysi, Christopher J. Bardeen, and coworkers in their Research Article on page 2414. A diolefinanthracene derivative undergoes E-Z photoisomerization to generate molecular-scale motion. When microwires composed of this molecule are exposed to UV and visible wavelengths, forward and ...

The Arctic (top) and Antarctic (bottom) polar regions. Various place names referred to in the text are marked. Dashed lines denote approximate boundaries for the polar regions; as their spatial footprint varies in relation to particular cryosphere and ocean elements or scientific disciplines, this chapter adopts a purposefully flexible approach to their delineation.

The quest for efficient and economically accessible cleaner methods to develop sustainable carbon-free energy sources induced a keen interest in the production of hydrogen fuel. This can be achieved via the water-splitting process and by exploiting solar energy. However, the use of adequate photocatalysts is required to reach this goal. Covalent triazine-based frameworks (CTFs) are potential ...

Adenine nucleotide translocase (ANT) is a well-known mitochondrial exchanger of ATP against ADP. In contrast, few studies have shown that ANT also mediates proton transport across the inner mitochondrial membrane. The results of these studies are controversial and lead to different hypotheses about molecular transport mechanisms. We hypothesized that the H⁺-transport mediated by ANT and ...

A mechanistic approach decomposes a system into components and scrutinizes the functioning of each component in isolation (where possible). However, a mechanistic explanation must also epistemically "recompose" the mechanism behavior (the explanandum) from these component functions (Bechtel 2010). There are molecular systems consisting of ...

The soil metapenome is also ultimately governed by the highly structured soil environment, resulting in a very heterogeneous availability of electron acceptors and redox chemistry, and both strong spatial and temporal variability.
