In the section above, I provided a sample of a Risk Acceptability Matrix. In this example, I identified three risk levels or "zones": low, medium, and high. Your risk acceptability does not necessarily need to have three zones. A common practice for Risk Evaluation is to identify which risk zones are acceptable and which require risk reduction.

Risk level and RPN are generated from the combination of severity level and failure probability. Although the intention is the same, there is a slight difference in using risk level and RPN in the determination of risk acceptability. Risk level works by placing the assigned severity and probability level in a matrix as shown below (Table 5.4).
