The VISA app is a screening tool to aid screening for presence of visual impairment, particularly after acquired brain injury. It screens for the more common forms of visual impairment that occur from brain injury, but, as a screening tool, it is not designed to screen for all possible visual impairments whether caused by brain injury or by other eye disease or other causes.

A CT scan can be used to check for signs of stroke or a brain tumour. But it cannot provide detailed information about the structure of the brain. Even if a brain scan does not show any obvious changes, this does not mean someone does not have dementia. Other scans and procedures to diagnose dementia
