Laser Diode Driver Circuit. A Laser Diode driver circuit is a circuit which is used to limit the current and then supplies to the Laser Diode, so it can work properly. If we directly connect it to the supply, due to more current it will damage. If current is low then it will not operate, because of not having sufficient power to start.

Basic Safe Electric Fuel Pump Wiring Diagram

This is the basic wiring diagram for SAFE electric fuel pump wiring. The diagram is color coded per circuit and only a few things may need to be said. Fuel pump wiring for the RED circuit is generally going to carry a much higher current than the relay. So use a larger gauge wire for lower voltage drop.

If you're wiring just one LED light to a constant current LED driver, the wiring is essentially the same as a constant voltage driver, but when you're wiring more than one lights you link them together like a daisy chain. The diagram below shows how to wire in series: Constant Current LEDs must be wired in series.
