Space warfare was seen primarily as an extension of nuclear warfare, and so many theoretical systems were based around the destruction or defense of ground and sea-based missiles. Space-based missiles were not attempted due to the Outer Space Treaty , which banned the use, testing or storage of nuclear weapons outside the Earth's atmosphere.

Space Warfare and Defense: A Historical Encyclopedia and ...

The militarisation of space involves the placement and development of weaponry and military technology in outer space. The early exploration of space in the mid-20th century had, in part, a military motivation, as the United States and the Soviet Union used it as an opportunity to demonstrate ballistic-missile technology and other technologies having the potential for military application. Outer space has since been used as an operating location for military spacecraft such as imaging and commun

What this Means for Space Warfare. The connection between the LOAC and space warfare has four aspects. First, the inherent right of self-defense applies to satellites and other critical space systems. Some have questioned if this right applies to satellites, under the adage that "satellites don't have mothers." If no human life is directly threatened by an armed attack in space, then, in theory, there is no need to protect or defend satellites through military means.

China Outlines Space War Plans - Washington Free Beacon

The creation of the Space Force nestled under the Department of the Air Force has ignited debate and rivalries not dissimilar to those which nearly crippled American defense in the post-World War II decade. The post-war defense unification debates were centered on the shape and scope of the roles and missions of the military services.
