Laplace transform is named in honour of the great French mathematician, Pierre Simon

De Laplace (). Like all transforms, the

Laplace transform changes one signal into

another according to some fixed set of rules

or equations. The best way to convert

differential equations into algebraic

equations is the use of Laplace

transformation.

types of functions of interest. A necessary  
condition for existence of the integral is that

Laplace transform - Wikipedia

The Laplace Transform is derived from Lerch ' s Cancellation Law. In the Laplace Transform method, the function in the time domain is transformed to a Laplace function in the frequency domain. This Laplace function will be in the form of an algebraic equation and it can be solved easily.
