Therefore open a text file in your preferred text editor, or directly download the code for this tutorial. Firstly we have to tell gnuplot the output terminal we want to use. The most common are png, svg, postscript or LaTeX output, but first we will start with the output just on the screen using the wxWidgets toolkit.

~~Plotting functions ← Gnuplotting~~

```
text 1 thru min (n, length of xs) of xs else "" end if else if script is c then set ys to {} repeat with i from 1 to n set  
v to xs ' s | | if missing value is v then return ys else set end of ys to v end if end repeat return ys else missing  
value end if end take -- unlines :: [String] -> String on unlines (xs) set {d1m, my text item delimiters ...
```

It's not arduino specific in any way, but it is a very excellent Python plotting toolkit. I've built a number of applications that plot data from a variety of microcontrollers in real-time to a graph, but that was really more of a two-step process: 1. Get data from device into computer, 2. plot realtime data.
