Understanding the Flowering Plants: A Practical Guide for ...

After pollination has occurred, the flowers transform into fruiting bodies, which protect the numerous seeds that are inside. As the seeds mature or ripen, the flowers will eventually fade away or drop. Once the seeds have dried, they are ready to be planted , repeating the life cycle of a flowering plant all over again. During the seed life cycle, you may want to discuss various ways seeds are dispersed, or

spread, as well.

Amazon.com: Understanding the Flowering Plants: A ...

All flowering plants have a well-developed vascular system, meaning they bear xylem and phloem for absorption of nutrition and water. The collected water is distributed to all parts of the plant. On the other hand, some of the non-flowering plants are devoid of this internal system for absorbing water and supplying it to other parts.

Flowering Plants Vs. Non-flowering Plants - Gardenerdy

Flowering plants need about 12 hours of light and the kind of lighting that they need is towards the red-end of the spectrum (warm lighting). Air Circulation– A proper air circulation is critical for the plants, especially at the flowering stage. While it brings in a fresh supply of oxygen and other elements that the plants need, another great thing that having a steady breeze does is that it ensures that temperatures remain cool.
