Waste Minimisation and Recycling Singapore's integrated solid waste management system focuses on two key thrusts – waste minimisation and recycling, or simply the 3Rs (Reduce, Reuse, Recycle). In land-scarce Singapore, waste-to-energy (WTE) incineration plants offer the best technical solution by reducing waste volume efficiently to conserve landfill space.

NEA | Waste Minimisation and Recycling

Waste management can be briefly defined as the process, in which the different kinds of wastes are being collected, processed and recycled in order to convert them into useful materials or to dispose them in an environment friendly way. The different types of wastes include the solid waste, liquid waste, gaseous waste and the electronic wastes etc.

Case studies - Aviation: Benefits Beyond Borders

This is a far reach from the Government ' s target for 22 per cent waste minimisation and recycling (Nadzri, 2007), 100 per cent separation at source and closure of all historic, unsanitary dump sites by 2020 (Japan International Cooperation Agency, 2006). It is clear to see that current practice does not reflect waste management policy in place.
